SLABARMOR™

Finally a way to score a win as flatwork contractor! Applying the patented SlabArmor nano-technology system substantially reduces the time it takes to cure a concrete slab. During the placing and finishing stage it offers unprecedented control over the concrete — reducing evaporation and eliminating the rush to finish the surface. You benefit from the multiple effects this product introduces to the concrete, acting as evaporation control agent, finishing aid, densifier and cure.

Spray it on – leave it on. And hand-off the job after just three days.

SlabArmor is a non-film forming, low VOC that, when used as a system and troweled into the concrete surface, provides densely consolidated and highly refined surfaces.

Further enhance the look of your slab with SlabArmor Plus Seal & Shine — a high gloss, stain and wear resistant finish.

The MQ Whiteman SlabArmor System...

- **Saves time and money** by compressing the project's time line.
- **Achieves long-lasting results.**
- **Eliminates the need** for additional treatment processes or products.
- **Controls evaporation** and eliminates volume loss.
- **Allows placing and finishing concrete** in virtually any weather condition.
- **Increases wear resistance.**
- **Enables workers to be environmentally responsible.**

EarthSmart™

MQ Whiteman Concrete Solutions are environmentally neutral compositions. Finish your job secure in the knowledge these products pose no risk to crew members or the environment. A benefit on jobs with LEED requirements.
